

The DJ's best weapon in the fight against dance-floor boredom!

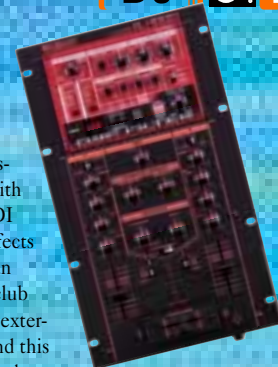

The DJ-2000 packs quite a lot of kick! It can do all the basics like split headphone monitoring, 3-band EQ per each of the four channels, selectable line and phone inputs, crossfading, and selectable metering. Then they add a three-band "Isolator," which can be used to radically boost or cut low, mid or high frequencies. Making Isolator control easy, the DJ-2000 incorporates an innovative Grab switch which allows DJs to instantly trigger Isolator EQ settings on-the-fly for drastic sonic manipulation. Yes, it has multi-effects built in, but there's more. They can be applied to a specific frequency range (Low, Mid, High, Full) across any channel (1,2, 3, 4, Mic, Master). Catch your breath, there's more. The DJ-2000's onboard BPM (beats-per-minute) counter automatically calculates and displays the tempo from the music being played allowing effects and external MIDI gear to be synced. A tap tempo button is provided as well. It even has provisions for starting and stopping other equipment via MIDI and serves as an integrated workspace for creative DJs.

DJs! Time to take your show to a whole new level!

The DJ-1000 might be the most flexible, expressive DJ mixer available! A two channel mixer with a built-in digital BPM counter, DSP Filter, MIDI syncing capabilities and some funky filtering effects reminiscent of an analog synth, the DJ-1000 is an incredible creative tool for dance, hip-hop and club DJs. Its ability to detect and display BPM from external sources such as vinyl records or CDs and send this information to a synth or MIDI sampler really makes the DJ-1000 stand out. There's never been a mixer like the DJ-1000!
